

Weekly Report
29/03/2019 – 04/04/2019

Last week, I talked with Dr. Leonel Merino who is the second author in our paper. We found a problem with the searching keywords while we recheck our systematic literature review step, the problem is the searching result of this time, and the backdate that we use is not equal. Now we are rechecking the different of the number of all papers. And we think the differences come from adding the new conference venues by IEEE or ACM between each year and then the searching of each time the results is not the same. Moreover, we decided to change some exclusion criteria that will fulfill the question gaps. And he will help me to correct the grammar after rewriting.

About the work with Lu Junhua, we have talked about the project for some detail and have some questions that are the project is related to the exchange program of Singapore students or not. If yes, it seems we will let Junhua discuss and plan based on the exchange program.
